EDUCATION

Year	Degree/Certificate	School/Institution	Score
2025 – 2028	B.Tech – Electronics & Telecommunication Engg.	SCTR's Pune Institute of Computer Technology, Pune, Maharashtra	Present
2022 – 2025	Diploma in Computer Engineering	ZES's Zeal Polytechnic, Pune, Maharashtra	93.83%

TECHNICAL SKILLS

- **Languages:** C++, Java, Python, JavaScript
- **Backend & APIs:** Node.js, Express.js, REST APIs, JWT Authentication, Socket.io
- **Databases:** PostgreSQL, MongoDB, SQL, Firebase Firestore
- **Frontend:** React.js, HTML, CSS, Material Design
- **DevOps & Tools:** Docker, Git, GitHub, Postman
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Computer Networks, System Design Fundamentals

PROJECTS

GateMatch — Real-Time Campus Ride Matching & Fare Splitter

React, Node.js, Express.js, Socket.io, PostgreSQL, PostGIS, Redis

Ongoing

- Engineering a real-time campus ride-sharing platform utilizing **PostGIS geospatial indexing** to dynamically match students based on pickup proximity, departure time, and destination overlap.
- Developing a **route-aware matching algorithm** to identify compatible riders while minimizing detours, paired with an automated fare-splitting workflow calculated using shared-route distance and participant count.
- Integrating **Socket.io** for low-latency coordination of ride requests, live seat availability, and match notifications, eliminating the need for continuous client-side API polling.
- Architecting robust safety and scaling capabilities, including verified user profiles, controlled location sharing, and emergency contacts, with **Redis** managing active sessions, caching, and scalable WebSocket connections.

CipherVault — Team-Based Environment Variable & Secrets Manager

React, Node.js, Express.js, Socket.io, MongoDB

Fall 2026

- **Built** a full-stack secrets management platform using MERN and Socket.io, supporting **50+ environment variables per project** with centralized team-based credential management.
- **Implemented** server-side AES encryption using Node.js crypto, encrypting **100% of sensitive credentials** before persistence in MongoDB.
- Developed an automated **.env** generation and export **pipeline**, eliminating manual copy-paste configuration errors and streamlining local developer onboarding.
- **Engineered** JWT authentication and role-based access control (RBAC), enforcing permission-based access across **3+ workspace roles** for sensitive production credentials.

HACKATHONS & COMPETITIONS

- **Track Winner** at the **Build for Billions** National-Level Hackathon, organized by NITK, for developing an innovative solution addressing a real-world problem and presenting a functional prototype.
- Shortlisted among the **Top 12 teams** out of 163+ teams in the **Startup Smackdown Hackathon**, solving real-world startup challenges through rapid prototyping and agile product development.
- Selected among the **Top 100 teams** out of 900+ teams in the **AWS IIT Bombay ImpactX Challenge**, developing innovation-driven solutions with potential social and economic impact.

ACHIEVEMENTS

- **Institute First Rank** – Diploma in Computer Engineering (**93.83%**)
